Response to Questions regarding
“Request for Interest for the Provision of Microtransit Services”

Area	Questions	Response
3.2 Needs and Possible Use Cases	<ul style="list-style-type: none"> TTD lists four different examples of use cases for the RFI. For clarity, is TTD looking for examples of how respondents have helped agencies address those use case scenarios with microtransit services software, or is TTD seeking recommendations for each of those use cases from agencies that may have had similar challenges? 	TTD is looking for respondents to detail how their microtransit service can meet those needs and what, if any, are the barriers to meeting those needs.
3.2 Use Case 1	<ul style="list-style-type: none"> What is the current ridership data for the TTD fixed-route transit services? 	FY19 - 321,883
4.3 Informational Sessions	<ul style="list-style-type: none"> Does TTD have a date they will invite respondents by? 	October 25, 2019
4.5 Delivery of Proposals	<ul style="list-style-type: none"> TTD states that Proposers must deliver an electronic version of its proposal on a USB flash drive. Does TTD want just the flash drive/electronic copy? Or possibly would TTD like an emailed copy and/or a bound or paper copy version? 	A printed copy is not necessary.
	<ul style="list-style-type: none"> Is TTD interested in information on extra features for microtransit interface including mobile fare payment, points of interest platform, driver rating system, etc? 	Please respond with whatever is necessary to successfully operate one or more case scenarios.
	<ul style="list-style-type: none"> Are technology providers required to submit information with a vehicle operator or free to submit individually? 	A technology provider could submit individually, but it is unlikely the case scenarios could be successful without vehicles.
